No Solvents
Non-Corrosive
Non-Hazardous
Biodegradable
Non-Flammable

KPR Rust Remover Gel

How to Use:

Neutral pH Non-acid rust remover gel. Works well on overhead and vertical surfaces. Removes surface rust on ferrous metals and removes oxide from non-ferrous metals. Wipe it on let it stand for 15 to 120 minutes depending on the amount of rust to be removed. Rinse it off with water. A one step treatment to remove corrosion from metals. No neutralizing steps required as it leaves the metal near to a neutral pH when done.

- Physically remove any loose rust and dirt away.

- Brush KPR Rust Remover Gel™ liberally on rusted area and leave on until rust becomes loose.

KPR Rust Remover Gel

- Wipe the solution clean and repeat the process if any rust remains; leave on longer for heavily rusted areas.

- Remove any remaining solution with a cloth or water. Try to remove the rust when the gel is still wet.

Gel form, rust stripper removes corrosion from steel, ferrous and non-ferrous metals. Removes light rust from cast iron. Gets rid of flash rust in as little as 15 minutes.

Heavily rusted surfaces can take up to 3 hours to remove the rust. Environmentally safe formula attacks the rust but will not hurt the metal(s) underneath, so it is great for restorations where bead-blasting and polishing are undesirable.

NOT recommended for pitted extra heavy rusted surfaces. [Contact KPR for details.](#)
