NOX-RUST® X-110 (3100)

(Wax-Based, Solvent Type, Cold Applied)

Nox-Rust X-110 (3100) liquid is a wax-based, solvent type, cold applied, corrosion preventive designed for use on ferrous and non-ferrous metals when exposed to indoor or outdoor storage conditions. Nox-Rust X-110 (3100) deposits a transparent, firm, wax-like film that is readily removable by conventionally used solvents or degreasing methods. It is formulated to fulfill the requirements of MIL-C-16173-E, Class I, Grade 4 Specification.

Physical Properties (Typical Values, Not Specifications)

Appearance

Product: Amber, low viscosity liquid

Film: Non-tacky, amber, wax-like, transparent film

Viscosity, 120-142 Sec. @ 77°F

Ford #4 Cup

Percent Non-Volatile 50% by Weight Specific Gravity 0.865

Pounds per Gallon 7.21

Flash Point 105°F. (Min.) Low Temperature Pass--No cracking

VOC (volatile organic content) 3.6 lbs./gal

Protective Properties (Typical Values)

Outdoor Exposure (uncovered) 1 year (min.)
Shed Exposure 5 years (min.)
Salt Spray (ASTM-B-117) 336 hours (min.)
Humidity Cabinets (ASTM-D-1748) 1,500 hours (min.)

Suggested Uses

- 1. Overseas shipments of unpainted metal parts and engine housings, indoor or outdoor, with or without cover.
- 2. Indoor protection of automotive body panels.
- 3. Long term, general purpose protection of metal parts, dies, tools, and rolls, where an easy-to-remove film is needed.

Surface Preparation

The maximum performance of Nox-Rust X-110 (3100) can be achieved only when the metal surfaces to be protected are clean, dry and free of rust, oil and mill scale. Daubert Cromwell recommends that the metal substrate temperature be 50-95°F (10-35°C) at the time of product application.

Page 2 Nox-Rust X-110 (3100)

Application

Apply by dipping, brushing or spraying. When dipped, the wet applied film thickness ranges from 3.0 to 4.0 and will dry in 1 hour to a film thickness of 1.5 to 2.0 mils. Under these conditions, coverage is 700 sq. ft. per gallon. Nox-Rust X-110 (3100) cures by solvents evaporation. Adequate ventilation is required for cure, and also to prevent the formation of an explosive atmosphere. Further information is provided in the MSDS sheet.

Removal

Remove by using mineral spirits or kerosene-soaked towels. This product can also be removed by vapor

Storage

Store at temperatures between 50-95°F (10-35°C). Mild agitation is recommended prior to use.

Caution

Adequate ventilation is required for cure and to ensure against formation of a combustible liquid. THE PARTIALLY CURED FILM SHOULD NOT BE EXPOSED TO IGNITION SOURCES SUCH AS FLARES, FLAMES, SPARKS, EXCESSIVE HEAT, OR TORCHES. Refer to Material Safety Data Sheet for additional handling and first aid information.

Note:

The addition of any product over or under this coating is not recommended. The use of additional coatings could result in chemical incompatibility, thus adversely affecting the performance of this coating as stated in the lab data section.
